

## — 3TG CONFLICT MINERALS

## Conflict Minerals (CMRT) Policy

Sensor Detection is committed to ensuring that minerals used in the components and assemblies we supply are sourced in a manner that supports ethical, social and environmentally responsible practices.

### OUR COMMITMENT

We recognise the risks associated with the extraction, trade and processing of Tin, Tantalum, Tungsten and Gold (3TG) from conflict-affected and high-risk areas (CAHRAs). Our aim is to ensure that our supply chain does not directly or indirectly contribute to human rights abuses, environmental harm, or the financing of armed groups.

### RESPONSIBLE SOURCING ACTIONS

- Gather and review CMRT documentation from key suppliers — up-to-date Conflict Minerals Reporting Templates as defined under the Responsible Minerals Initiative (RMI).
- Evaluate supplier responses for red flags or unacceptable smelters.

### WHERE RISKS ARE IDENTIFIED

We will not knowingly engage with suppliers or smelters where we identify a reasonable risk that materials originate from, or are linked to, parties involved in human rights abuses or unethical practices. Where risks are identified, we will:

- Work with the supplier to take corrective actions, or
- Remove the supplier from our approved supply chain if remediation is not possible.

### CUSTOMER REQUESTS

Customers may request a CMRT form or declaration as required.
